

# Cybersecurity Incident Response Services

Your organization faces risk from cybersecurity threats on a daily basis and must react quickly if a security incident or data breach occurs.

We can help your organization:

- **Legal Requirements:** Understand the legal and regulatory requirements your organization must meet as it reacts to a cybersecurity incident (e.g. fulfilling mandatory reporting and record keeping where personal information is lost or corrupted).
- **Legal Risk:** Understand the legal risk that your organization faces from a loss of confidential, financial or personal information as a result of a cybersecurity incident or data breach (e.g. class action lawsuits where customer information is lost or corrupted).
- **Part of the CSIRT:** We can become part of your Cybersecurity Incident Response Team (CSIRT) to develop a response plan for the security incident or data breach. If an incident/data breach does occur, we can assume the role of a data breach response coach, giving the organization an outside and independent view on immediate and longer term next steps.

In addition, we can assist by advising on:

- when and what should be communicated to the public (working with a public relations expert)
- who should be contacted and when (in the event customer or personal information is breached)
- ransomware issues (such as whether a ransom should be paid, dealing with ransomware encryption keys, etc.)
- the type of security review (e.g. forensic review) that should be completed and on engaging security experts (protect solicitor/client privilege) to complete the review

We advise including an external law firm in your incident response plan with specific contacts designated. This will allow for immediate engagement without delay should a cybersecurity incident occur.

We also offer Cybersecurity Assessment Services to assist your organization to reduce the risk of a cybersecurity incident

## MLT Aikins Advantage

- We have the right combination of legal and IT industry experience. Our experienced team has specific experience with IT law, Cybersecurity law, tech litigation and privacy law. With lawyers who have worked as in-house counsel as well as lawyers who have worked in the IT industry, we understand issues from a client, technical, and IT industry perspective.

# Cybersecurity Incident Response Services

- We work with you as part of your team. You know your business; our job is important to listen to you to ensure the compliance plan is customized and tailored to your organization. We do not take a one-size-fits-all approach.

We will bring an experience and an independent perspective. This can be key when your organization is in the heat of the moment trying to determine how to respond to a cybersecurity incident.
